Pal,Ashish Ghosh,Malay K. Kundu,2012-11-27 Any task that involves decision making can benefit from soft computing techniques which allow premature decisions to be deferred The processing and analysis of images is no exception to this rule In the classical image analysis paradigm the first step is nearly always some sort of segmentation process in which the image is divided into hopefully meaningful parts It was pointed out nearly 30 years ago by Prewitt 1 that the decisions involved in image segmentation could be postponed by regarding the image parts as fuzzy rather than crisp subsets of the image It was also realized very early that many basic properties of and operations on image subsets could be extended to fuzzy subsets for example the classic paper on fuzzy sets by Zadeh 2 discussed the set algebra of fuzzy sets using sup for union and inf for intersection and extended the defmition of convexity to fuzzy sets These and similar ideas allowed many of the methods of image analysis to be generalized to fuzzy image parts For are cent review on geometric description of fuzzy sets see e g 3 Fuzzy methods are also valuable in image processing and coding where learning processes can be important in choosing the parameters of filters quantizers etc *Applications of Image Processing and Soft Computing Systems in Agriculture* Razmjooy, Navid,Estrela, Vania Vieira,2019-02-22 The variety and abundance of qualitative characteristics of agricultural products have been the main reasons for the development of different types of non destructive methods NDTs Quality control of these products is one of the most important tasks in manufacturing processes The use of control and automation has become more widespread and new approaches provide opportunities for production competition through new technologies Applications of Image Processing and Soft Computing Systems in Agriculture examines applications of artificial intelligence in agriculture and the main uses of shape analysis on agricultural products such as relationships between form and genetics adaptation product characteristics and product sorting Additionally it provides insights developed through computer vision techniques Highlighting such topics as deep learning agribusiness and augmented reality it is designed for academicians researchers agricultural practitioners and industry professionals **Soft Computing for Image Processing** Sankar K. Pal,Ashish Ghosh,Malay K. Kundu,2000-02-17 The volume provides a
