Real-time Software Design Philip Heller, 1987 **Real-Time Software Design** HELLER, 2013-11-11 Computers these days spend a fairly low fraction of their time computing In fact the very word computer has become something of a misnomer In the American History museum of the Smithsonian Institute in Washington D C there is an exhibit of early computers Three features of these machines are striking First they are enormous especially in comparison to their capabilities The museum visitor who has just come from the Natural History building next door may be reminded of fossilized dinosaur bones Second they don't look at all like modern computing machines The cases are made of crude metal or beautifully worked wood recalling an approach to the design of scientific apparatus which belongs to a previous generation Lastly the function of these machines is mainly to compute to perform rapid arithmetic The computer of today bears little resemblance in size form or function to its ancestors It is most obviously smaller by several orders of magnitude Its form has changed from the carefully crafted one of a kind instrument to the mass produced microchip But the change in its function is perhaps the most dramatic of all Instead of being a computing engine it is a machine for the processing of information The word processor has come into common usage A processor used to be a central processing unit a set of wires and vacuum tubes or later a set of printed circuit boards which was nestled deep within the computer Today a processor is an off the shelf component
