Industrial Applications of Titanium and Zirconium C. S. Young, John C. Durham, 1986 **Status of Titanium Net-Shape Technology** D. Eylon, F.H. Froes, R.G. Vogt, 1986 The status of net shape technologies in the titanium industry is reviewed in this paper including powder metallurgy casting and isothermal precision forging Although titanium and its alloys are a design choice for many industrial and aerospace applications use is still limited because of the relative high component cost the result of high material processing and machining costs Net shape technologies are an attractive avenue for reducing the cost without sacrificing properties and reliability The three approaches to titanium net shape technology offer a range of shape and property combinations Titanium casting and isothermal precision forging are already an industrial reality and powder metallurgy is rapidly reaching such a position The isothermal precision forging and powder metallurgy net shape approaches not only offer lower cost and reduced material use but also provide some mechanical properties superior to conventional products because of microstructural homogeneity and refinement **Net Shape Technology in Aerospace Structures** , 1986 *Titanium Net Shape Technologies* F.
