antibiotics has leveled off because the number of microbiological products with antimicrobial properties is not infinite In 1972 some 2500 antibiotic substances were known of which approximately one per cent are clinically useful Further search for antibiotics has led to increasing frequency of rediscoveries and drastically decreasing frequency of discoveries of new antibiotics As the search for antibiotics with a standard methodology in conventional ecological niches has exhausted itself there is a paucity of new and interesting substances on which to undertake modes mechanisms of action studies Secondly the mechanism of action field has come of age and its results are now academic knowledge This also holds true for synthetic chemotherapeutic drugs and becomes the case rapidly for toxic substances with anti eukaryotic action The study of mechanisms of action was undertaken for two reasons one was the basic scientific desire to know how antimicrobial substances interfered with microbial biochemistry the second one was the hope that such information would be useful in the premeditated design of synthetic antimicrobials

Crypto Washtrading. Empirical Evidence and Measures to Reduce Washtrading Philipp Zeyer, 2021-12-20 Bachelor Thesis from the year 2021 in the subject Business economics Banking Stock Exchanges Insurance Accounting grade 1.3 University of Frankfurt Main House of Finance language English abstract This thesis makes use of statistical methods such as the Pearson's Chi squared analysis to find significant deviations in the first significant digit distributions in the historical transaction record of selected regulated crypto exchanges compared to Benford's Law The analysis of trade size clustering behavior at key round numbers is used in order to detect possible signs of washtrading followed by the volume spike analysis where the correlation between the four exchanges in terms of rise and fall of their volume is carefully observed Aloosh and Li 2019 and Lin et al 2021 suggest a divergence between regulated and unregulated exchanges in regards to the washtrading activity in the sense that most regulated exchanges seemed to confirm most statistical analysis while many unregulated crypto exchanges have shown signs of significant violations Opposed to these findings the focus will lie on regulated crypto exchanges only for which partly abnormal patterns are in fact found at least regarding the first significant digit distribution Furthermore the various regulatory frameworks for the selected exchanges are illustrated consisting of Gemini Bitstamp Kraken and Zaiif The centre of attention will then shift to showing off possible incentives for the various parties to engage in washtrading in the first place The thesis lays out how these activities distort exchange ratings and the connected metrics as well as aid in creating illegal schemes such as pump and dumps
