*Linear Algebra* David Poole,2005 David Poole s innovative book emphasizes vectors and geometric intuition from the start and better prepares students to make the transition from the computational aspects of the course to the theoretical Poole covers vectors and vector geometry first to enable students to visualize the mathematics while they are doing matrix operations

With a concrete understanding of vector geometry students are able to visualize and understand the meaning of the calculations that they will encounter. By seeing the mathematics and understanding the underlying geometry students develop mathematical maturity and can think abstractly when they reach vector spaces. Throughout the text Poole's direct conversational writing style connects with students and an abundant selection of applications from a broad range of disciplines clearly demonstrates the relevance of linear algebra.

**Cab Art Chronicles**, 1981

**Modern Geometries** James R. Smart, 1998 This comprehensive best selling text focuses on the study of many different geometries rather than a single geometry and is thoroughly modern in its approach. Each chapter is essentially a short course on one aspect of modern geometry including finite geometries, the geometry of transformations, convexity, advanced Euclidean geometry, inversion, projective geometry, geometric aspects of topology, and non-Euclidean geometries. This edition reflects the recommendations of the COMAP proceedings on Geometry's Future, the NCTM standards, and the Professional Standards for Teaching Mathematics. References to a new companion text *Active Geometry* by David A. Thomas encourage students to explore the geometry of motion through the use of computer software. Using *Active Geometry* at the beginning of various sections allows professors to give students a somewhat more intuitive introduction using current technology before moving on to more abstract concepts and theorems.
