MontiArc - Architectural Modeling and Simulation of Interactive Distributed Systems Arne Haber,2016-09-02 Formal ADLs offer great potential to analyse the architecture of a system predict the overall performance by using simulations and allow to automatically generate parts of the implementation Nevertheless ADLs are rather not used in industrial practice since several problems hinder to exploit their potential to the full extend This thesis elaborates the design of an ADL that copes with these impediments of ADLs in practice Therefore the design of a lightweight ADL is derived which also provides well defined extension points to be adapted to a certain domain or development process Furthermore it is investigated how architectural modeling can be enriched with agile development methods to support incremental modeling and the validation of system architectures Therefore a set detailed of requirements for architectural modeling and the simulation of system architectures is defined and MontiArc a concrete ADL to model logical architectures of distributed interactive systems is derived The language is based on the mathematical FOCUS BS01 framework which allows to simulate modeled systems in an event based style Code generators and a simulation framework provide means to continuously refine and test architectural models To add new features or adapt the language to a new domain a corresponding language extension method is presented to extend the syntax language processing tools and code generators of the ADL A lightweight model library concept is presented which allows to develop and reuse component models and their implementation in a controlled and transparent way The developed language the simulator and the language extension techniques have been examined in several case studies which either used or extended MontiArc **Internetworking with TCP/IP: Principles, protocols, and architecture** Douglas Comer,2006 This best selling conceptual introduction to TCP IP internetworking protocols interweaves a clear discussion of fundamentals with the latest technologies Leading author Doug Comer covers layering and shows how all protocols in the TCP IP suite fit into the five layer model With a new focus on CIDR addressing this revision addresses MPLS and IP switching technology traffic scheduling VOIP Explicit Congestion Notification ECN and Selective ACKnowledgement SACK Includes coverage of Voice and Video Over IP RTP IP coverage a discussion of routing architectures examination of Internet application services such as domain name system DNS electronic mail SMTP MIME file transfer and access FTP TFTP NFS remote login TELNET rlogin and network management SNMP MIB ANS I a description of mobile IP and private network interconnections such as NAT and VPN The new edition includes updates to every chapter updated examples a new chapter on MPLS and IP switching technology and an expanded TCP description that featuers Explicit Congestion Notification ECN and Selective ACKnowledgement SACK For network and web designers implementers and administrators and for anyone interested in how the Internet works ADSL Standards, Implementation, and Architecture Charles K. Summers,1999-06-21 With its promise of high speed Internet access Asymmetric Digital Subscriber Line ADSL techniques are now making their way out of the laboratory and into the general consumer market This creates the need for

telecommunications professionals to have not just an awareness of the technology but an in depth understanding of its workings its potential and its applications ADSL Standards Implementation and Architecture provides this knowledge with a detailed treatment of current ADSL standards along with overviews of the implementation marketing and architectural issues involved in the rollout of ADSL technology Beginning with an overview of analog and digital communication including the difficulties of using existing lines for new services the author discusses the various types of xDSL transmission methods the specific transmission equipment and hardware requirements of ADSL and devotes considerable attention to the protocols ATM Ethernet and TCP IP used in conjunction with ADSL The final chapter pulls together all of the aspects of ADSL to address software architecture issues such as nesting protocols coordinating signaling control with data processes special real time issues and strategies for the migration to ADSL and beyond As a collection of topics ADSL Standards Implementation and Architecture explains why and how ADSL will take its place within the family of data transmission protocols used around the world It serves as a primary resource for telecommunications professionals who need to know more about ADSL and how they can use it It also provides technical managers and manufacturers with the ideal reference for an overview of the technology and how it might be applicable to their needs **Communication and Architectural Support for Network-Based Parallel Computing** Dhabaleswar K. Panda,Craig B. Stunkel,1997-01-24 This book constitutes the refereed proceedings of the First International Workshop on Communication and Architectural Support for Network Based Parallel Computing CANPC 97 held in San Antonio Texas USA in February 1997 The 19 revised full papers presented were carefully selected from a total of 36 submissions Among the topics addressed are processor network interfaces communication protocols high performance network technology operating systems and architectural issues and load balancing techniques All in all the papers competently describe the state of the art for network based computing systems *Architectural Methodology Report* ,2000 *Parallel Computing Architectures and APIs* Vivek Kale,2019-12-06 Parallel Computing Architectures and APIs IoT Big Data Stream Processing commences from the point high performance uniprocessors were becoming increasingly complex expensive and power hungry A basic trade off exists between the use of one or a small number of such complex processors at one extreme and a moderate to very large number of simpler processors at the other When combined with a high bandwidth interprocessor communication facility leads to significant simplification of the design process However two major roadblocks prevent the widespread adoption of such moderately to massively parallel architectures the interprocessor communication bottleneck and the difficulty and high cost of algorithm software development One of the most important reasons for studying parallel computing architectures is to learn how to extract the best performance from parallel systems Specifically you must understand its architectures so that you will be able to exploit those architectures during programming via the standardized APIs This book would be useful for analysts designers and developers of high throughput computing systems essential for big data stream processing emanating from IoT driven cyber

physical systems CPS This pragmatic book Devolves uniprocessors in terms of a ladder of abstractions to ascertain say performance characteristics at a particular level of abstraction Explains limitations of uniprocessor high performance because of Moore s Law Introduces basics of processors networks and distributed systems Explains characteristics of parallel systems parallel computing models and parallel algorithms Explains the three primary categorical representatives of parallel computing architectures namely shared memory message passing and stream processing Introduces the three primary categorical representatives of parallel programming APIs namely OpenMP MPI and CUDA Provides an overview of Internet of Things IoT wireless sensor networks WSN sensor data processing Big Data and stream processing Provides introduction to 5G communications Edge and Fog computing Parallel Computing Architectures and APIs IoT Big Data Stream Processing discusses stream processing that enables the gathering processing and analysis of high volume heterogeneous continuous Internet of Things IoT big data streams to extract insights and actionable results in real time Application domains requiring data stream management include military homeland security sensor networks financial applications network management web site performance tracking real time credit card fraud detection etc **IEEE/ACM/IFIP International Conference on Hardware/Software Codesign & System Synthesis** ,2003 *Architectural Analysis and Acceleration for Server Network Processing* Li Zhao,2005 Protocol Architecture Model Report ,2000 **TCP/IP** Sidnie Feit,1993 *IoT and Edge Computing for Architects* Perry Lea,2020-03-06 Create scalable IoT and edge computing solutions with practical architectural strategies robust communication protocols and integrated analytics support for informed decision making Key Features Build robust IoT and edge computing systems using real world architectural strategies Explore a comprehensive range of technologies from sensors and RF to cloud infrastructure and analytics Gain the insights needed to make informed technical decisions across communication protocols security and system design Book DescriptionIndustries are embracing IoT technologies to improve operational expenses product life and people s well being An architectural guide is needed if you want to traverse the spectrum of technologies needed to build a successful IoT system whether that s a single device or millions of IoT devices IoT and Edge Computing for Architects 2E encompasses the entire spectrum of IoT solutions from IoT sensors to the cloud It examines modern sensor systems focusing on their power and functionality It also looks at communication theory paying close attention to near range PAN including the new Bluetooth 5 0 specification and mesh networks Then the book explores IP based communication in LAN and WAN including 802 11ah 5G LTE cellular Sigfox and LoRaWAN It also explains edge computing routing and gateways and their role in fog computing as well as the messaging protocols of MQTT 5 0 and CoAP With the data now in internet form you ll get an understanding of cloud and fog architectures including the OpenFog standards The book wraps up the analytics portion with the application of statistical analysis complex event processing and deep learning models The book then concludes by providing a holistic view of IoT security cryptography and shell security in addition to software defined perimeters and blockchains What you will learn
