theoretical practical founding of a European Art Therapy as discipline still has to be done including construction of a communicative bridge to partners in other continents or countries This development work has two strands of development One follows a more theoretical direction with European Art Therapy as a research and teaching subject as an objective in view The other is directed more towards practical fieldwork which in turn can lead to the establishment of funds of experience as well as quantitative and qualitative investigations and thus to theoretical methodical statements In the contributions on hand both connections pervade Naturally the individual articles in this collection do not fully expound the volume of art therapeutic work throughout Europe but they are a source of information and inspiration for the user from theory and or practice who can then find his particular niche with his own specific interests within the cross section and subsequently continue the discourse spatially and objectively

Evidence-based Practices in Mental Health Care American Psychiatric Association,2003 As the first attempt to synthesize the movement toward widespread implementation of evidence based mental health practices this groundbreaking collection articulates the basic tenets of evidence based medicine and shows how practices proven effective by clinical services research could improve the lives of many people Intended to stimulate much needed public discussion these remarkable contributions cover both general issues such as Implementing practices in routine mental health settings including strategies for disseminating evidence based practices to staff members Ensuring that efforts to implement such practices are informed by the knowledge and experience of administrators clinicians patients and advocates Integrating evidence based practices with the recovery model and focusing on guidelines and algorithms for pharmacologic treatment of people with severe mental illness Identifying the policy implications of the movement particularly in public sector settings and describing eight courses of action for addressing the gap between science and practice and specific practices such as Describing critical components of practices for which substantial evidence exists such as supported employment dual diagnosis services and assertive community treatment Developing an evidence base for particular populations such as children and adolescents and geriatric patients and for clinical subgroups such as patients with severe mental illness and posttraumatic stress disorder and implementing a range of practices for each population Debate in public forums is critical to explaining the benefits of evidence based care and allaying the fears of patients practitioners administrators policy makers and vested interest groups that evidence based care excludes them from the decision making process Patients need to know that their individual characteristics preferences and autonomy are highly valued and won t be discounted by rigid adherence to the particular treatments Practitioners need to know about the credibility of the evidence base and about new techniques and responsibilities and to understand that their favorite practices won t necessarily be excluded during initial attempts to implement evidence based practices Administrators and policy makers need to know about financing organizing implementing and sustaining new practices

Finally vested interest groups need to know that the introduction of evidence based practices doesn't mean that what they do now is ineffective. This unique and densely informative volume will be welcomed by mental health care professionals and by lawmakers, planners, administrators and others who are charged with the responsibility of providing effective care to vulnerable populations.

In Recovery Nora Jacobson, 2004. For hundreds of years people diagnosed with mental illness were thought to be hopeless cases destined to suffer inevitable deterioration. Beginning in the early 1990s however providers and policymakers in mental health systems came to promote recovery as their goal. But what does recovery truly mean? For example to consumers of mental health services it implies empowerment and greater resources dedicated to healing. To HMOs it can suggest a means of cost savings when benefits cease upon recovery. This book considers recovery from multiple angles. Traditionally Nora Jacobson notes recovery was defined as symptom abatement or a return to a normal state of health but as activists, mental health professionals and policymakers sought to develop recovery oriented systems other meanings emerged. Jacobson's analysis describes the complexes of ideas that have defined recovery in various contexts over time. The first meaning recovery as evidence involves the theories, statistics, therapies, legislation and myriad other factors that constituted the first one hundred years of mental health services provision in the United States. Recovery as experience brought the voices of patients into the conversation while recovery as ideology drew on both recovery as evidence and recovery as experience to rally support for specific approaches and service delivery models. This in turn became the basis for recovery as policy which developed as assorted representative bodies such as commissions and task forces planned reforms of the mental health system. Finally recovery as politics emerged as reformers confronted harsh economic realities and entrenched ideas about evidence, experience and ideology. Throughout Jacobson draws on her research in Wisconsin a state with a long history of innovation in mental health services. Her study there included several years of fieldwork and interviews with the government appointed groups charged with making recovery policy. Thus *In Recovery* also provides an inside account of the process of policy development and implementation.
