

# Blockchain Technology Explained

A blockchain is an online database, popularly used for cryptocurrency transactions, that stores information chronologically and in blocks.

1

Information is recorded in a block.

2

Once the block is full, it's chained to the rest of the blocks in the database.

3

An empty block is added to the end of the chain to record new information.

uncertainty of the power supply in Germany due to the surge in fluctuating renewable energy power plant failures and accidental changes in consumption lead to the energy system imbalance This not only threatens the system security but also turns into financially punitive consequences for energy market players Current market based solutions and the German established data exchange platform with market rules MaBiS do not foster a bottom up collaboration in balancing groups to timely offset schedule deviations The capability to modify and or shift consumption of industrial or commercial end customers as well as to adjust energy output of generation units gives a unique opportunity for organizing a shared platform for flexibility services exchange to mitigate the risk of paying imbalance tariff
