Lie Groups Wulf Rossmann, 2006 *Lie Groups* is intended as an introduction to the theory of Lie groups and their representations at the advanced undergraduate or beginning graduate level. It covers the essentials of the subject starting from basic undergraduate mathematics. The correspondence between linear Lie groups and Lie algebras is developed in its local and global aspects. The classical groups are analysed in detail first with elementary matrix methods then with the help of the structural tools typical of the theory of semisimple groups such as Cartan subgroups, roots, weights and reflections. The fundamental groups of the classical groups are worked out as an application of these methods. Manifolds are introduced when needed in connection with homogeneous spaces and the elements of differential and integral calculus on manifolds are presented with special emphasis on integration on groups and homogeneous spaces. Representation theory starts from first principles such as Schur's lemma and its consequences and proceeds from there to the Peter-Weyl theorem, Weyl's character formula and the Borel-Weil theorem, all in the context of linear groups.

Compact Projective Planes Helmut Salzmann, Dieter Betten, Theo Grundhöfer, Hermann Hähl, Rainer Löwen, Markus Stroppel, 2011-06-24. The aim of the series is to present new and important developments in pure and applied mathematics. Well established in the community over two decades it offers a large library of mathematics including several important classics. The volumes supply thorough and detailed expositions of the methods and ideas essential to the topics in question. In addition they convey their relationships to other parts of mathematics. The series is addressed to advanced readers wishing to thoroughly study the topic.
