Malapi-Nelson,2017-07-03 This book is a philosophical exploration of the theoretical causes behind the collapse of classical cybernetics as well as the lesson that this episode can provide to current emergent technologies Alcibiades Malapi Nelson advances the idea that the cybernetic understanding of the nature of a machine entails ontological and epistemological consequences that created both material and theoretical conundrums However he proposes that given our current state of materials research scientific practices and research tools there might be a way for cybernetics to flourish this time The book starts with a historical and theoretical articulation of cybernetics in order to proceed with a philosophical explanation of its collapse emphasizing the work of Alan Turing Ross Ashby and John von Neumann Subsequently Malapi Nelson unveils the common metaphysical signature shared between cybernetics and emergent technologies identifying this signature as

transhumanist in nature Finally avenues of research that may allow these disruptive technologies to circumvent the cybernetic fate are indicated It is proposed that emerging technologies ultimately entail an affirmation of humanity **In the Scope of Logic, Methodology and Philosophy of Science** Peter Gärdenfors, Jan Wolenski, K.

The Essence of Rum: a Theory of the Intensional and Extensional Aspects of Lisp-type Computation Carolyn L. Talcott, Stanford University. Computer Science Department, 1985 Rum is a theory of applicative side effect free computations over an algebraic data structure It goes beyond a theory of functions computed by programs treating both intensional and extensional aspects of computation Powerful programming tools such as streams object oriented programming escape mechanisms and co routines can be represented Intensional properties include the number of multiplications executed the number of context switches and the maximum stack depth required in a computation Extensional properties include notions of equality for streams and co routines and characterization of functionals implementing strategies for searching tree structured spaces Precise definitions of informal concepts such as stream and co routine are given and their mathematical theory is developed Operations on programs treated include program transformations which introduce functional and control abstractions a compiling morphism that provides a representation of control abstractions as functional abstractions and operations that transform intensional properties to extensional properties The goal is not only to account for programming practice in Lisp but also to improve practice by providing mathematical tools for developing programs and building programming systems Rum views computation as a process of generating computation structures trees for context independent computations and sequences for context dependent computations The recursion theorem gives a fixed point function that computes computationally minimal fixed points The context insensitivity theorem says that context dependent computations are uniformly parameterized by the calling context and that computations in which context dependence is localized can be treated like context independent computations

from Antiquity to the Present Joseph W. Dauben,1985 Copyright, Data and Creativity in the Digital Age Julian Warner,2020-09-01 The Supreme Court of the United States in Feist v Rural 1991 required that databases must have a minimal degree of creativity for copyright The judgment was highly significant and the subsequent period is understood as the post Feist era It has been globally influential However the decision is extremely complex and remains unsatisfactorily interpreted In particular it has been impossible to illuminate the creativity requirement The book gives an account of the decision s conceptual structure focusing on its full delineation of the opposite to creativity In a radical and unprecedented innovation it is correlated with an automatic computational process Creativity itself is understood as non computational or directly human activity concerned with meaning Determining the presence of creativity is reduced to a four stage test This work then has acute practical current relevance to property in data in the digital age it will also be of theoretical interest to and is aimed at researchers in practitioners and students of intellectual property worldwide
