The Role of Legumes in the Farming Systems of the Mediterranean Areas A.E. Osman,M.M. Ibrahim,M.A. Jones,2012-12-06 Legumes are an important source of protein for humans and animals They provide nutritionally rich crop residues for animal feed and play a key role in maintaining the productivity of soils particularly through biological nitrogen fixation They are therefore of immense value in rainfed farming systems The International Center for Agricultural Research in the Dry Areas ICARDA has a responsibility for research on food pasture and forage legumes The Center also has the broad objective of improving livestock production in rainfed farming systems Although food legumes have been known and grown by farmers in the WANA region for a long time their productivity has remained low and variable Forage legumes on the other hand are not so well known by farmers of the region and their role in the farming systems is not so well understood Thus we need to develop the concept of using forage legumes as crops and to fit them into cropping systems In its efforts to increase the productivity of food legumes and develop the legume based crop livestock systems ICARDA has established a network of scientists in the different National Agricultural Research Systems in the region To further strengthen this network ICARDA convened a workshop on The Role of Legumes in the Farming Systems of Mediterranean Areas in Tunis Tunisia 20 24 June 1988 This workshop was co sponsored by UNDP who also contributed funds for this publication

Dollarization of the Banking System Gianni De Nicoló,Patrick Honohan,Alain Ize,2003 *Proceedings*,2004 *The Fragility of China* Dennis Unkovic,2024-07-23 Dennis Unkovic asserts that China is contrary to popular belief not poised to take over from the United States as the world's pre eminent superpower Chinese President Xi Jinping believes his country is destined to displace the United States as the world's top military and economic power Every policy that Xi has put forth since assuming power in 2013 has been carefully crafted with this end goal in mind Nearly four decades of meteoric economic growth have convinced many in the West that modern China is indeed an invincible regime and that Xi's grand plan will come to fruition Closer examination reveals that China is not invulnerable but in fact is far more fragile than it outwardly appears In this book

Dennis Unkovic coins the term MaxTrends to identify critical factors and developments that have the potential to derail Xi's aggressive ambitions for China. These MaxTrends include alarming demographic shifts, cracks in the global supply chain, an accelerating global arms race, and the Taiwan conundrum, all of which indicate that China's strength may be more illusion than reality. Unkovic warns that the world's democracies must take increasingly aggressive steps to exploit China's vulnerabilities if they hope to blunt Xi's ambitions. Right now, China and the United States find themselves competing in a tight race to the top. In today's unprecedented arena of economic, military, and political challenges, the nation that acts more quickly and prudently will win.
