

Lesson 9: Thermal Physics

Thermal concepts

Conduction, convection and thermal radiation

- When two solids of different temperatures touch, thermal energy is transferred from the hotter object to the cooler object through a process called **conduction**.
- When atoms of one portion of a material are in contact with vibrating atoms of another portion, the vibration is transferred from atom to atom.

Direction of heat flow

- High T portions vibrate more than low T portions, so we can imagine the vibration “impulse” to travel through the material, from high T to low T .
