Traditional Chinese Medicines Milne,2006-11-01 **Modern Computational Approaches to Traditional Chinese Medicine** Zhaohui Wu,Huajun Chen,Xiaohong Jiang,2012-10-22 Recognized as an essential component of Chinese culture Traditional Chinese Medicine TCM is both an ancient medical system and one still used widely in China today TCM s independently evolved knowledge system is expressed mainly in the

Chinese language and the information is frequently only available through ancient classics and confidential family records making it difficult to utilize. The major concern in TCM is how to consolidate and integrate the data enabling efficient retrieval and discovery of novel knowledge from the dispersed data. Computational approaches such as data mining, semantic reasoning, and computational intelligence have emerged as innovative approaches for the reservation and utilization of this knowledge system. Typically, this requires an interdisciplinary approach involving Chinese culture, computer science, modern healthcare, and life sciences. This book examines the computerization of TCM information and knowledge to provide intelligent resources and supporting evidences for clinical decision making, drug discovery, and education. Recent research results from the Traditional Chinese Medicine Informatics Group of Zhejiang University are presented, gathering in one resource systematic approaches for massive data processing in TCM. These include the utilization of modern Semantic Web and data mining methods for more advanced data integration, data analysis, and integrative knowledge discovery. This book will appeal to medical professionals, life sciences students, computer scientists, and those interested in integrative, complementary, and alternative medicine. Interdisciplinary book bringing together Traditional Chinese Medicine and computer scientists. Introduces novel network technologies to Traditional Chinese Medicine informatics. Provides theory and practical examples and case studies of new techniques.

as data mining based on optimization techniques from biological behavior of animals and applications in Traditional Chinese Medicine clinical research and health care management Artificial Intelligence in Traditional Medicine Research and Application Taoyang Wu, Lihong Peng, Jidong Lang, Michael Heinrich, 2026-02-24 Traditional medicine TM represents a vast body of knowledge and practices aimed at preventing, diagnosing, improving, or treating both physical and mental illnesses. Despite significant advancements, there remain critical challenges that demand ongoing research in this field. These include issues such as the variability and the poorly defined composition of traditional medicine preparations, the lack of standardization, and insufficient quality data on their efficacy. Moreover, there are ongoing debates about how best to integrate traditional and biomedical practices within modern healthcare systems. The advent of artificial intelligence (AI) has introduced a new dimension to this domain. Recent breakthroughs in AI, including machine learning and deep learning, have begun to enhance the efficacy, understanding, and procedural efficiency of traditional medicine. This Research Topic aims to explore the transformative potential of AI in traditional medicine while addressing the significant hurdles that accompany its application. The focus is to investigate how AI can optimize the discovery and development process in traditional medicine, improve efficacy predictions, and efficiently integrate traditional healing approaches into contemporary healthcare practices. To gather further insights into this area, we welcome articles addressing, but not limited to, the following themes: AI Utilization in Traditional Medicine; Applications of deep learning and machine learning for data analysis and pharmacodynamics; AI and Network Analysis in Traditional Medicine; Exploring herbal network relationships and complex mechanisms through AI technology; AI-driven Redevelopment of Traditional Medicines; Utilizing AI for novel applications and target discovery in traditional medicine; AI in Traditional Medicine Target Prediction; Utilizing AI to predict interactions and potential therapeutic targets; Novel Combinations of Traditional Medicines; Using AI to predict and analyze effective combinations for disease treatment; Prospective Studies and Reviews; Forward-looking research and comprehensive reviews on AI applications in traditional medicine. Important Note: All contributions to this Research Topic must follow the guideline listed in this section. The introduction needs to describe the background of the research object, focusing on the traditional or local use of a traditional medicine, and provide bibliographical references that illustrate its recent application in general healthcare. Network studies must critically assess the pharmacological evidence to evaluate the potential effects of a preparation, herbal medical product, and the limitations of the evidence. Purely *in silico* AI-based studies are outside of our scope. In general, network analysis must be conducted in combination with experimental pharmacology *in vitro* or *in vivo* or are based on a sound body of experimental pharmacology. Chemical anti-oxidant assays like the DPPH or ABTS assay are of no pharmacological relevance. Therefore, they can only be used as chemical analytical assays without pharmacological claims. Please self-assess your MS using the ConPhyMP tool (<https://gaonline.org>) best practice and submit the relevant sections of the tool with your submission.
