Knerr, 2023-07-03 The curricular approach aligns the mission goals outcomes and practices of a student affairs division unit or other unit that works to educate students beyond the classroom with those of the institution and organizes intentional and developmentally sequenced strategies to facilitate student learning In this book the authors explain how to implement a curricular approach for educating students beyond the classroom The book is based on more than a decade of implementing curricular approaches on multiple campuses contributing to the scholarship on the curricular approach and helping many campuses design implement and assess their student learning efforts The curricular approach is rooted in scholarship and the connections between what we know about learning assessment pedagogy and student success For many who have been socialized in a more traditional programming approach it may feel revolutionary Yet it is also obvious because it is straightforward and simple

Deep Active Learning Kayo Matsushita, 2017-09-12 This is the first book to connect the concepts of active learning and deep learning and to delineate theory and practice through collaboration between scholars in higher education from three countries Japan the United States and Sweden as well as different subject areas education psychology learning science teacher training dentistry and business It is only since the beginning of the twenty first century that active learning has become key to the shift from teaching to learning in Japanese higher education However active learning in Japan as in many other countries is just an umbrella term for teaching methods that promote students active participation such as group work discussions presentations and so on What is needed for students is not just active learning but deep active learning Deep learning focuses on content and quality of learning whereas active learning especially in Japan focuses on methods of learning Deep active learning is placed at the intersection of active learning and deep learning referring to learning that engages students with the world as an object of learning while interacting with others and helps the students connect what they are learning with their previous knowledge and experiences as well as their future lives What curricula pedagogies assessments and learning environments facilitate such deep active learning This book attempts to respond to that question by linking theory with practice
