Neighbourhood landscapes are the quintessential forms of urban landscapes in most cities worldwide They are pervasive and hence experienced by the large majority of urban dwellers in their everyday life More than parks nature reserves or nature areas which are visited as destinations neighbourhood landscapes provide the most immediate frequent and convenient form of nature experienced by urban dwellers on a daily basis They are also valuable as social spaces to bring residents together foster social ties and strengthen communities Despite their importance surprisingly little has been written to guide the planning and design of neighbourhood landscapes This book is written for a specific purpose to illustrate how the design of neighbourhood landscapes helps to deliver more benefits for urban dwellers and at the same time protect ecosystems that facilitate human well being This is in turn important as the synergistic relationships between human well being quality of biophysical urban environment and health of human environment interactions fundamentally underpin urban sustainability The authors emphasize the role neighbourhood landscapes play in forging connections between people and nature people and people and people and place Most of all the book highlights the role of focusing on people in this endeavour as it is only when landscapes are appropriately designed and when people recognize these benefits that they become valued and

protected as a community resource This book is organized into two parts Part 1 focuses on the conceptual foundations that underpin the neighbourhood landscape design guidelines being developed In this section the authors describe the key concepts relating functions of neighbourhood landscapes to the key urban development goals of sustainability liveability and reliance how they can be represented in a framework and how a synthesis of current knowledge of cities as socio ecological systems helps to identify principles that can guide the designing of neighbourhood landscapes Part 2 is more application focused and is centred on neighbourhood landscape design guidelines inspired by the concept of ecosystem services The guidelines consist of design approaches practical strategies design targets and performance monitoring indicators for tracking the performance of neighbourhood landscapes The book is written for readers in academia and design practice and anyone who has a role in shaping neighbourhood landscapes for the benefit of urban dwellers **Design** ,1978
