Structure Of Evolutionary Theory:

The Structure of Evolutionary Theory Stephen Jay Gould, 2002-03-21 The world's most revered and eloquent interpreter of evolutionary ideas offers here a work of explanatory force unprecedented in our time a landmark publication both for its historical sweep and for its scientific vision With characteristic attention to detail Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism that natural selection works on organisms not genes or species that it is almost exclusively the mechanism of adaptive evolutionary change and that these changes are incremental not drastic Next he examines the three critiques that currently challenge this classic Darwinian edifice that selection operates on multiple levels from the gene to the group that evolution proceeds by a variety of mechanisms not just natural selection and that causes operating at broader scales including catastrophes have figured prominently in the course of evolution Then in a stunning tour de force that will likely stimulate discussion and debate for decades Gould proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought In 2001 the Library of Congress named Stephen Jay Gould one of America's eighty three Living Legends people who embody the quintessentially American ideal of individual creativity conviction dedication and exuberance Each of these qualities finds full expression in this peerless work the likes of which the scientific world has not seen and may not see again for well over a century [The Structure of Evolutionary Theory](#) Paul Thompson, **Evolution and Development** Alan C. Love, 2024-03-07 The intersection of development and evolution has always harbored conceptual issues but many of these are on display in contemporary evolutionary developmental biology evo devo These issues include 1 the precise constitution of evo devo with its focus on both the evolution of development and the developmental basis of evolution and how it fits within evolutionary theory 2 the nature of evo devo model systems that comprise the material of comparative and experimental research 3 the puzzle of how to understand the widely used notion of conserved mechanisms 4 the definition of evolutionary novelties and expectations for how to explain them and 5 the demand of interdisciplinary collaboration that derives from investigating complex phenomena at key moments in the history of life such as the fin limb transition This Element treats these conceptual issues with close attention to both empirical detail and scientific practice to offer new perspectives on evolution and development This title is also available as Open Access on Cambridge Core *Evolutionary Theory and Processes: Modern Perspectives* Solomon P. Wasser, 2012-12-06 This volume consists of papers written by evolutionary molecular and organismal biologists geneticists ecologists behavioural ecologists morphologists mathematicians theoreticians and experimentalists in honour of Professor Eviatar Eibi Nevo on the occasion of his seventieth birthday The contributors are only a small subset of Eibi's many friends collaborators and students not that one can distinguish these categories among Eibi's colleagues His widespread influence and activity both in Israel and more generally as a leading evolutionary biologist is indicated by his many co authors on books

and papers and by his many students integrated in teaching and research This volume presents some of the most recent dramatic results of molecular genomic and organismal evolutionary processes It represents analyses experiments observations reviews discussions and forecasts of evolutionary theory comprising both novel methods and results reanalyzed and reviewed data sets based on comparative experimental and theoretical studies utilizing model organisms across phylogeny including bacteria fungi plants animals and humans It elucidates the revolution in molecular biology that ushered in our understanding of the evolutionary process over time and space The topics discussed include major problems of evolutionary theory concerning origins phylogeny relative importance of evolutionary forces structure and function adaptation and speciation in space and time in changing and stressful environments A major emerging generalization is the nonrandomness of genome structure highlighting the importance of natural selection as a major organizing evolutionary force not only at the phenotypic level but most importantly at the interlinked genotypic molecular level The integration between the molecular and organismal levels unifies life which is subjected to the mechanism of natural selection as a major orienting evolutionary force Literary Structure, Evolution, and Value Jurij Striedter,1989 **Evolutionary Theory** ,1989

The Structure and Confirmation of Evolutionary Theory Elisabeth Anne Lloyd,1994 Traditionally a scientific theory is viewed as based on universal laws of nature that serve as axioms for logical deduction In analyzing the logical structure of evolutionary biology Elisabeth Lloyd argues that the semantic account is more appropriate and powerful This book will be of interest to biologists and philosophers alike The Structure and Confirmation of Evolutionary Theory Elizabeth Anne Lloyd,1994 **The Structure of Biological Theories** Paul Thompson,1989-03-16 The central thesis of this book is that the semantic conception is a logical methodologically and heuristically richer and more accurate account of scientific theorizing and in particular of theorizing in evolutionary biology than the more widely adhered to syntactic conception In this book the author outlines both the conceptions indicating the significant problems with the syntactic conception explains and criticizes two influential syntactic conception accounts of the structure of evolutionary theorizing Thompson also argues that the semantic conception provides a richer and more accurate understanding than the syntactic conception of sociobiological explanation of the testability of sociobiology and of the role of culture and cognition in evolutionary explanations of human behavior **Philosophy of Biological Science** David L. Peyton Young,2020-06-16 Neoclassical economics asumes that people are highly rational and can reason their way through even the most complex economic problems In *Individual Strategy and Social Structure* Peyton Young argues for a more realistic

view in which people have a limited understanding of their environment are sometimes short sighted and occasionally act in perverse ways He shows how the cumulative experiences of many such individuals coalesce over time into customs norms and institutions that govern economic and social life He develops a theory that predicts how such institutions evolve and characterizes their welfare properties The ideas are illustrated through a variety of examples including patterns of residential segregation rules of the road claims on property forms of economic contracts and norms of equity The book relies on new results in evolutionary game theory and stochastic dynamical systems theory many of them originated by the author It can serve as an introductory text or be read on its own as a contribution to the study of economic and social institutions
