Farrington, 1994 This work offers a fundamental analysis of the psychological factors that underlie crime and criminal behaviour Among the topics addressed are antisocial personality the Eysenck personality theory low intelligence low attainment and neuropsychological deficit and unpopularity *Proceedings of the British Psychological Society* British Psychological Society, 2004 Nigerian Journal of Social Work Education, 2014 **British Medical Journal**, 1975

Bipolar Psychopharmacotherapy Hagop S. Akiskal, Mauricio Tohen, 2006-01-11 Treatment for bipolar disorder in older adults Kenneth I Shulman Psychosocial interventions in bipolar disorders rationale and effectiveness David J Miklowitz The pivotal role of psychoeducation in the long term treatment of bipolar disorder Francesc Colom and Eduard Vieta The role of treatment setting in the pharmacotherapy of bipolar disorder Jean Michel Azorin Suicide prevention Zolt n Rihmer Principles of caring for bipolar patients Hagop S Akiskal and Kareen K Akiskal Circadian Impact of Psychosocial Factors in Depression Patricia Lynn Haynes, 2003 Severe life events increase the risk for major depression and depression is associated with disrupted sleep However the impact of life stress on sleep has not been explored in individuals with unipolar depression This project examined the proposed association between stressful life events and sleep using the social rhythm hypothesis of depression Specifically I tested whether participants with depression when compared to normal controls have a less stable social rhythms i e less consistent daily routines that are more reactive to life stress b a greater disruption of daily sleep and activity following life stress c greater reactivity of sleep and daytime activity to disrupted social rhythms d less light exposure disrupted sleep and increased daytime motor activity Thirty nine normal controls and 39 depressed individuals participated in the study Over the course of two weeks project staff gathered actigraphic estimates of motor activity and light exposure prospective daily measures of social interactions and interview information about life events occurring in the previous 4 months Data were analyzed by logistic and linear regression techniques Results demonstrated that the presence of an event hypothesized to disrupt social rhythms in the last four months correlated with disrupted sleep continuity in depressed individuals but not in normal controls In depressed individuals only decreased sleep continuity was associated with fewer daily structured activities especially those activities with others actively involved Individuals experiencing decreased sleep

continuity low daytime light exposure high in bed nighttime light exposure and a later activity acrophase had an increased likelihood of being depressed In addition individuals with more variable routines characterized by less active involvement with others were likely to be depressed These findings are consistent with the proposed model in that individuals with depression experience more sleep disruption in response to life stress than non depressed individuals At the same time daily routine does not appear to mediate the relationship between life stress and sleep Future studies are needed to determine whether this sensitivity to life stress precedes the development of depression thereby indicating a potential risk factor or etiological mechanism in the development of this disorder *The Journal of Transpersonal Psychology* ,1970 *Handbook of Antisocial Behavior* David M. Stoff,James Breiling,Jack D. Maser,1997 In the latter part of this century an increasingly vigorous and sophisticated scientific study of antisocial behavior has emerged This new science has offered partial answers to some very important questions which will lead to better understanding and prevention of antisocial behavior In 50 chapters more than 100 leading scientists clinicians and scholars review the research in their area of expertise to provide extraordinary extensive and deep coverage of the field in a single volume The Handbook of Antisocial Behavior is an indispensable resource for mental health practitioners as well as anyone involved in research into violence and aggression including psychologists psychiatrists neuroscientists public health professionals epidemiologists sociologists and criminologists
