Topics Surrounding the Combinatorial Anabelian Geometry of Hyperbolic Curves II Yuichiro Hoshi, Shinichi Mochizuki, 2022-05-20 The present monograph further develops the study via the techniques of combinatorial anabelian geometry of the profinite fundamental groups of configuration spaces associated to hyperbolic curves over algebraically closed fields of characteristic zero The starting point of the theory of the present monograph is a combinatorial anabelian result which allows one to reduce issues concerning the anabelian geometry of configuration spaces to issues concerning the anabelian geometry of hyperbolic curves as well as to give purely group theoretic characterizations of the cuspidal inertia subgroups of one dimensional subquotients of the profinite fundamental group of a configuration space We then turn to the study of tripod synchronization i e of the phenomenon that an outer automorphism of the profinite fundamental group of a log configuration space associated to a stable log curve induces the same outer automorphism on certain subquotients of such a fundamental group determined by tripods i e copies of the projective line minus three points The theory of tripod synchronization shows that such outer automorphisms exhibit somewhat different behavior from the behavior that occurs in the case of discrete fundamental groups and moreover may be applied to obtain various strong results concerning profinite Dehn multi twists In the final portion of the monograph we develop a theory of localizability on the dual graph of a stable log curve for the condition that an outer automorphism of the profinite fundamental group of the stable log curve lift to an outer automorphism of the profinite fundamental group of a corresponding log configuration space This localizability is combined with the theory of tripod synchronization to construct a purely combinatorial analogue of the natural outer surjection from the tale fundamental group of the moduli stack of hyperbolic curves over the field of rational numbers to the absolute Galois group of the field of rational numbers

The Farmers and Fruit-growers' Guide W. H. Clarke,New South Wales. Department of Agriculture,1897 **Crystalline Cohomology of Algebraic Stacks and Hyodo-Kato Cohomology** Martin C. Olsson,2007 In this text the author uses stack theoretic techniques to study the crystalline structure on the de Rham cohomology of a proper smooth scheme over a p adic field and applications to p adic Hodge theory He develops a general theory of crystalline cohomology and de Rham Witt complexes for algebraic stacks and applies it to the construction and study of the varphi N G structure on de Rham cohomology Using the stack theoretic point of view instead of log geometry he develops the ingredients needed to prove the C_ text st conjecture using the method of Fontaine Messing Hyodo Kato and Tsuji except for the key computation of p adic vanishing cycles He also generalizes the construction of the monodromy operator to schemes with more general types of reduction than semistable and proves new results about tameness of the action of Galois on cohomology
