Algorithms and Computation Seok-Hee Hong, Hiroshi Nagamochi, Takuro Fukunaga, 2008-12 This book constitutes the refereed proceedings of the 19th International Symposium on Algorithms and Computation ISAAC 2008 held in Gold Coast Australia in December 2008 The 78 revised full papers together with 3 invited talks presented were carefully reviewed and selected from 229 submissions for inclusion in the book The papers are organized in topical sections on approximation algorithms online algorithms data structure and algorithms game theory graph algorithms fixed parameter tractability distributed algorithms database approximation algorithms computational biology computational geometry complexity networks optimization as well as routing

Distributed Computing by Oblivious Mobile Robots Paola Flocchini, Giuseppe Prencipe, Nicola Santoro, 2022-06-01 The study of what can be computed by a team of autonomous mobile robots originally started in robotics and AI has become increasingly popular in theoretical computer science especially in distributed computing where it is now an integral part of the investigations on computability by mobile entities The robots are identical computational entities located and able to move in a spatial universe they operate without explicit communication and are usually unable to remember the past they are extremely simple with limited resources and individually quite weak However collectively the robots are capable of performing complex tasks and form a system with desirable fault tolerant and self stabilizing properties The research has been concerned with the computational aspects of such systems In particular the focus has been on the minimal capabilities that the robots should have in order to solve a problem This book focuses on the recent algorithmic results in the field of distributed computing by oblivious mobile robots unable to remember the past After introducing the computational model with its nuances we focus on basic coordination problems pattern formation gathering scattering leader election as well as on dynamic tasks such as flocking For each of these problems we provide a snapshot of the state of the art reviewing the existing algorithmic results In doing so we outline solution techniques and we analyze the impact of the different assumptions on the robots computability power Table of Contents Introduction Computational Models Gathering and Convergence Pattern Formation Scatterings and Coverings Flocking Other Directions **Human**

Stabilization, Safety, and Security of Distributed Systems Paul Spirakis, Philippas Tsigas, 2017-10-20 This book constitutes the refereed proceedings of the 19th International Symposium on Stabilization Safety and Security of Distributed Systems SSS 2017 held in Boston MA USA in November 2017 The 29 revised full papers presented together with 8 revised short papers were carefully reviewed and selected from 68 initial submissions This year the Symposium was organized into three tracks reflecting major trends related to self systems Stabilizing Systems Theory and Practice Distributed Computing

and Communication Networks and Computer Security and Information Privacy *Distributed Computing by Mobile Entities* Paola Flocchini, Giuseppe Prencipe, Nicola Santoro, 2019-01-12 Distributed Computing by Mobile Entities is concerned with the study of the computational and complexity issues arising in systems of decentralized computational entities operating in a spatial universe Encompassing and modeling a large variety of application environments and systems from robotic swarms to networks of mobile sensors from software mobile agents in communication networks to crawlers and viruses on the web the theoretical research in this area intersects distributed computing with the fields of computational geometry especially for continuous spaces control theory graph theory and combinatorics especially for discrete spaces The research focus is on determining what tasks can be performed by the entities under what conditions and at what cost In particular the central question is to determine what minimal hypotheses allow a given problem to be solved This book is based on the lectures and tutorial presented at the research meeting on Moving and Computing mac held at La Maddalena Island in June 2017 Greatly expanded revised and updated each of the lectures forms an individual Chapter Together they provide a map of the current knowledge about the boundaries of distributed computing by mobile entities **The Three Robots** Art Fettig, 1981-01-01 Pos a cheerful robot tries to convince her fellow machines Semi posand Neg that they can smile and enjoy life more if they learn to be happy and keep their teeth brushed and flossed like her The Three Robots Find a Grandpa Art Fettig, 1984-04 **Proceedings of the International Symposium and Exposition on Robots**, 1982 Structured Object-Oriented Formal Language and Method Shaoying Liu, Zhenhua Duan, Cong Tian, Fumiko Nagoya, 2017-04-20 This book constitutes revised selected papers from the 6th International Workshop on Structures Object Oriented Formal Language and Method SOFL MSVL 2016 held in Tokyo Japan in November 2016 The 13 papers presented in this volume were carefully reviewed and selected from 26 submissions They are organized in topical sections named modeling and specification animation and prototyping verification and validation and model checking **Stabilization, Safety, and Security of Distributed Systems** Borzoo Bonakdarpour, Franck Petit, 2016-11-01 This book constitutes the refereed proceedings of the 18th International Symposium on Stabilization Safety and Security of Distributed Systems SSS 2016 held in Lyon France in November 2016 This year the Program Committee was organized into three groups reflecting the major trends related to self systems a Self and Autonomic Computing b Foundations and c Networks Multi Agent Systems and Mobility *Twelfth Conference on Innovative Applications of Artificial Intelligence* American Association for Artificial Intelligence, 2000 AAAI proceedings describe innovative concepts techniques perspectives and observations that present promising research directions in artificial intelligence The annual AAAI National Conference provides a forum for information exchange and interaction among researchers from all disciplines of AI Contributions include theoretical experimental and empirical results Topics cover principles of cognition perception and action the design application and evaluation of AI algorithms and systems architectures and frameworks for classes of AI systems and analyses of tasks and domains in which intelligent systems
