String Theory and Grand Unification ,1993 *String Theory, Quantum Gravity And The Unification Of The Fundamental Interactions - Proceedings Of The Conference* Massimo Bianchi,Enzo Marinari,F Fucito,Augusto Sagnotti,1993-08-27 String theory is the candidate for the unification of all fundamental interactions including gravity In the past few years this active field of research has developed very rapidly and in several different directions The aim of the conference is to give an overview of the status of the art in string theory through the contributions of the major experts in this field The main topics include string unification and effective Lagrangians N 2 string theories 2 d quantum gravity stringy black holes topological field theory conformal field theories strings and quantum field theory **PASCOS 2004** , String Theory Research Progress Ferenc N. Balogh,2008 String theory is a model of fundamental physics whose building blocks are one dimensional extended objects called strings rather than the zero dimensional point particles that form the basis for the standard model of particle physics The phrase is often used as shorthand for Superstring theory as well as related theories such as M theory By replacing the point like particles with strings an apparently consistent quantum theory of gravity emerges Moreover it may be possible to unify the known natural forces gravitational electromagnetic weak nuclear and strong nuclear by describing them with the same set of equations Studies of string theory have revealed that it predicts higher dimensional objects called branes String theory strongly suggests the existence of ten or eleven in M theory space time dimensions as opposed to the usual four three spatial and one temporal used in relativity theory **High Energy Physics Index** ,1991 Launching Of La Belle Epoque Of High Energy Physics And Cosmology, The: A Festschrift For Paul Frampton In His 60th Year And Memorial Tributes To Behram Kursunoglu (1922-2003) - Procs Of The 32nd Coral Gables Conf Thomas L Curtright,Arnold Perlmutter,Stephan Mintz,2005-01-25 Recent experimental results with direct bearing on theories of cosmological dark matter energy as well as continuing work on neutrino masses and mixing have invigorated both particle physics and cosmology and should continue to do so well into the 21st century thereby launching a beautiful new epoch for these fields The expert contributions from this conference took stock of these developments This volume contains papers by over 40 physicists that summarize and interpret the newest findings and suggest future avenues to be explored A number of new theoretical ideas are also presented dealing with progress in understanding the dynamics and symmetries of strings and branes renormalization in quantum field theory possible Lorentz violation effects and related problems Ongoing and next generation gravitational and neutrino experiments are described and the issues of unification are dealt with in the context of and beyond the standard model Together the contributions provide a useful blend of experimental and theoretical physics from many prominent physicists including three Nobel Laureates The volume also contains information of an historical nature concerning the contributions to physics by Paul Frampton on the occasion of his 60th year and summarizing the career of Behram Kursunoglu 1922 2003 **Subject Guide to Books in Print** ,1993 **String Phenomenology**,

Mintz, Arnold Perlmutter, 2013-11-11 The International Conference Orbis Scientiae 1996 focused on the topics The Neutrino Mass Light Cone Quantization Monopole Condensation Dark Matter and Gravitational Waves which we have adopted as the title of these proceedings Was there any exciting news at the conference Maybe it depends on who answers the question There was an almost unanimous agreement on the overall success of the conference as was evidenced by the fact that in the after dinner remarks by one of us BNK the suggestion of organizing the conference on a biannual basis was presented but not accepted the participants wanted the continuation of the tradition to convene annually We shall of course comply The expected observation of gravitational waves will constitute the most exciting vindication of Einstein's general relativity This subject is attracting the attention of the experimentalists and theorists alike We hope that by the first decade of the third millennium or earlier gravitational waves will be detected opening the way for a search for gravitons somewhere in the universe presumably through the observations in the CMBR The theoretical basis of the graviton search will take us to quantum gravity and eventually to the modification of general relativity to include the Planck scale behavior of gravity at energies 19 of the order of 10^{19} GeV
