

Compound Interest - Problem Solving

Compound Interest

$$A = P(1 + r)^n$$

Where: A = the final amount
 P = the original investment
 r = the % rate (in decimal form)
 n = the number of times the interest is applied

Here is the formula used to calculate compound interest:

Section A Finding the Time Period

- 1) £1,000 is invested in a savings account that gives 3% compound interest per annum. After x years, there is £1,159.27 in the account. Calculate the value of x , the number of years that the money has been in the account for.
- 2) £1,000 is invested in a savings account that gives 2.4% compound interest per annum. After x years, there is £1,208.93 in the account. Calculate the value of x , the number of years that the money has been in the account for.
- 3) £3,600 is invested in a savings account that gives 2.4% compound interest per annum. After x years, there is £3,865.47 in the account. Calculate the value of x , the number of years that the money has been in the account for.
- 4) £2,300 is invested in a savings account that gives 4% compound interest for the first year and 0.8% per annum for each year after that. After x years, there is £2,469.47 in the account. Calculate the value of x , the number of years that the money has been in the account for.

Section B Finding the Initial Investment

- 1) Some money is invested for 3 years in a savings account. The account earns 3% per annum compound interest. After 3 years, there is £1,365.91 in the bank account. Calculate the how much was invested.
- 2) Some money is invested for 3 years in a savings account. The account earns 3.5% per annum compound interest. After 3 years, there is £2,993.54 in the bank account. Calculate the how much was invested.

Subcommittee on General Credit Control and Debt Management, 1952 *AIDS, South Africa, and the Politics of Knowledge* Professor Jeremy R Youde, 2013-03-28 Through an in depth examination of the interactions between the South African government and the international AIDS control regime Jeremy Youde examines not only the emergence of an epistemic community but also the development of a counter epistemic community offering fundamentally different understandings of AIDS and radically different policy prescriptions In addition individuals have become influential in the crafting of the South African government s AIDS policies despite universal condemnation from the international scientific community This study highlights the relevance and importance of Africa to international affairs The actions of African states call into question many of our basic assumptions and challenge us to refine our analytical framework It is ideally suited to scholars interested in African studies international organizations global governance and infectious diseases

sample portfolio outperforms the current asset allocation of German life insurers and naive diversification. However, portfolios with significant exposure to private equity or stocks outperform the sample portfolio in terms of Sharpe ratio but require a higher risk tolerance. Nevertheless, the sample portfolio achieves a satisfactory risk and return profile and is well balanced in terms of risk contribution.
