Méndez, 2015-01-08 This monograph has two main objectives The first one is to give a self contained exposition of the relevant facts about set operads in the context of combinatorial species and its operations This approach has various advantages one of them is that the definition of combinatorial operations on species product sum substitution and derivative are simple and natural They were designed as the set theoretical counterparts of the homonym operations on exponential generating functions giving an immediate insight on the combinatorial meaning of them The second objective is more ambitious Before formulating it authors present a brief
