

Understanding Diabetes

What is Diabetes?

Diabetes is a group of metabolic disorders characterized by a chronic elevation in the blood glucose levels. It occurs when the body does not produce enough insulin, or the insulin it produces does not work properly. Without the right amount of insulin, the body cannot use glucose properly.

Types of Diabetes

There are three main types of diabetes: Type 1, Type 2, and Gestational Diabetes. Type 1 is an autoimmune disease where the body's immune system attacks the insulin-producing cells in the pancreas. Type 2 is a lifestyle-related disease where the body's cells become resistant to insulin. Gestational Diabetes is a temporary condition that occurs during pregnancy.

What is Insulin?

Insulin is a hormone produced by the pancreas that helps cells absorb glucose. It acts as a key that unlocks the cells, allowing glucose to enter and be used for energy. Without insulin, glucose cannot enter the cells, leading to high blood sugar levels.

The liver takes up glucose, converts it into glycogen and stores it.

Glucose signals the liver to convert glycogen to glucose and release the glucose into the blood.

The conversion of glycogen into glucose is called gluconeogenesis and takes up half of the glucose in the blood.

Type 1 Diabetes: In this condition, the body does not produce enough insulin. This is an autoimmune disease where the immune system attacks the insulin-producing cells in the pancreas. The body cannot produce enough insulin to keep blood sugar levels under control. This disease is usually diagnosed in children and young adults.

Type 2 Diabetes: This condition occurs when the body does not use insulin effectively. The body's cells become resistant to insulin, and the pancreas cannot produce enough insulin to overcome this resistance. This disease is usually diagnosed in middle-aged and older adults. It is often associated with obesity and a sedentary lifestyle.

What is Glucose?

Glucose is a type of sugar and is the body's main source of energy. It is produced by the liver and is transported in the blood to the cells. Cells use glucose as fuel to produce energy.
