Understanding Climate Change Feedbacks:

Understanding Climate Change Feedbacks National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Climate Research Committee, Panel on Climate Change Feedbacks, 2004-01-02 During the past decade scientists have learned much about the complex natural processes that influence climate variability and change and our ability to model climate has increased significantly We also have begun to better identify those parts of the climate system that are particularly important and not well understood and that therefore limit our ability to project the future evolution of Earth's climate One of these critical areas is our understanding of the role of feedbacks in the climate system and their role in determining climate sensitivity Feedbacks are processes in the climate system that can either amplify or dampen the system's response to changed forcings This study looks at what is known and not known about climate change feedbacks and seeks to identify the feedback processes most in need of improved understanding It identifies key observations needed to monitor and understand climate feedbacks discusses ways to evaluate progress in understanding climate feedbacks recommends ways to improve climate modeling and analysis for climate feedbacks research and identifies priority areas for research
