The Vicissitudes of Nature Richard J. Bernstein, 2022-09-29 The relation between humans and nature is at the core of the great existential threats of our time from climate change extreme weather and environmental destruction to devastating pandemics We are becoming increasingly aware of the fact that unless we change our behavior radically and quickly the most likely outcome will be the destruction of countless species and forms of life including our own But we also need to change the way we think about nature and think about the relation between humans and nature this is a key intellectual task In this important book Richard J Bernstein argues that an adequate conception of humans and nature capable of facing up to the existential threats of our time requires taking full account of the major projects dealing with nature in the past Focusing on key figures of modernity Spinoza Hume Kant Hegel Marx Nietzsche and Freud Bernstein reconstructs their conceptions of nature and uncovers the reasons that led them to their distinctive views Working through the contradictions and incompatibilities among these diverse thinkers Bernstein identifies common themes that have shaped their struggles in dealing with the relation of humans to nature He offers a critical overview of the challenges illuminated by each perspective that must be confronted in our thinking of nature today As a prolegomenon to rethinking humanity and nature this book uncovers the rich conceptual resources available within the modern tradition that can help us to develop an adequate understanding of nature for our time

The Imagination in Education Sean Blenkinsop, 2009 This collection of essays from scholars in eleven countries centres upon the theory and practice of the use of imagination in education By bringing together studies covering a wide range of subject matter we trust

that the reader will have the opportunity to appreciate both the diversity within the field and the significance of the topics discussed. We hope too that readers will find connections to their own areas of study. The 13 essays present distinct yet converging points of view whether it be a discussion of the imagination as a virtue, the use of imagination as a means to improve aboriginal education in Northern Canada, or the description of a museum in Brazil in which the imagination of the child is central to the project. Separately each of the papers identifies and explores a distinct aspect of Imaginative Education; together they begin to define the breadth and richness of the field. These essays have been selected from papers presented over a period of several years to research symposiums in imagination and education held every summer in Vancouver, Canada, under the auspices of the Imaginative Education Research Group in the Faculty of Education at Simon Fraser University.
